

Chelsea Young is an award-winning Industrial Designer whose products can be found in millions of customer's homes. Her recognitions include three Red Dot Awards, A Gold from the International Design Awards, and thirteen design patents. She is currently using her expertise in her Director role to guide and mentor other talented industrial designers within Spectrum. Her team develops the look and physical product experiences of WiFi routers, internet modems, and more. Her involvement follows a device from idea generation, to production, and beyond. Chelsea ensures that Spectrum's hardware not only provides a premium user experience to all customers, but also meets the complexities that are demanded of Charter's unique and vast supply chain. This is made certain by closely partnering with many stakeholders within Charter, as well as partnering with Charter's large network of trusted manufacturing partners.

After graduating from the University of Colorado at Boulder with a double degree in Mechanical Engineering and Studio Art, she soon found her way into industrial design. From there she went on to co-found a Boulder-based design consultancy where she enabled the ideas of dozens of businesses and entrepreneurs across the country. Her skilled include physical product development, branding, prototyping, and manufacturing. She has worked at Spectrum for more than 6 years producing and conceptualizing the future of customer premises equipment in cable.
